[MORPHOSIS video link](#)

DURATION : MINIMUM of 2 DAYS

4 to 6 hrs / day

The shape and size of the installation evolves over the course of several days.

SPACE : Outdoors

The archi-structures require an average of 30m x 8m of ground space (depending on the structure that is chosen and/or the situation of the creation). This will be decided together once the location is selected.

Height : minimum of 9m

A 2m radius must be provided around the entire base of the structure to provide for comfortable installation and easy circulation for the public.

GROUND REQUIREMENTS

Grass, clay or sand for public safety in the event of a fall.

=> Ensure that there are no obstacles on the ground or anywhere near the selected space (ex. manhole covers, curbs, sidewalks, tree roots, electrical wires, tree branches, etc.)

Please send us the exact address, photos, GPS/Google Earth coordinates / as much information as possible concerning the selected space so we can properly prepare for the installation and adaptation of the structure(s) to the site. The proposed structure will be chosen based on the location, environment, landscape and architecture.

LIGHTING FOR THE EVENING (option)

The need for this will be determined together

If the space remains open and/or visible to the public in the evening: proper lighting must be provided (minimum of 4 projectors, PC type).

SECURITY SURVEILLANCE

Plan for surveillance of the structure during the times when we are not present and throughout the night, if the space remains open to the public.

PLANNING

-DAY -1: The team arrives (minimum of 3 people): unloading of materials and preparation of installation - duration 4 to 6 hours.

=>plan for the arrival of the truck + a parking space as close as possible to the installation site for the unloading of approximately one hundred, 8m long bamboo stems.

-INSTALLATION DAYS: The team arrives 1 to 2 hours in advance

-FINAL DAY OF INSTALLATION: Structure is disassembled at the end of the day => 2 technicians needed for 2 hours to help with dismantling and loading.

OTHER ITEMS

=> Vehicle: Renault Trafic / 2.40m height / License Plate CQ077FS + 4m trailer (overall) to be parked in a secure location.

=>Ample water supply should be available for the team

PUBLIC SAFETY

=> A sign is posted around the structure to inform and detail the possibilities and risks

« MORPHOSIS is a climbing archi-structure made of bamboo stems, which has been built on site.

Children and adults of all ages are welcome to climb, and/or, older children are invited to participate in building the structure. For security reasons, we ask that accompanying adult supervisors remain close by and vigilant while children are climbing. Children under 6 years old must be assisted by an adult. Access to the structure is open to all, under the responsibility of accompanying parents-adults.

CLIMBERS:

- Remove any items that might inhibit your climb: scarves, hand bags, etc.
- Always keep your hands and feet close to the knots (black).
- Remain calm and concentrated while climbing (no jumping, no racing).
- Keep on your shoes (sneakers) or climb in your bare feet if your shoes are slippery.
- DO NOT climb in socks. Socks are a slip hazard.
- Remain attentive and vigilant of yourself and those around you.»

MATERIALS USED AND SECURITY DETAILS

=> Adults have access to children at all the climbing points on the structure.

=> Maximum climbing height: 2.50m

Morphosis is made up of a hundred or more, 8m long bamboo stems. 5 to 6 cm (for easy handling). Minimal resistance: 200kg /linear meter. The self-supporting structure is built in a manner that makes it 100% stable.

The junctions are made every 40 cm with inner tube knots (ultra resistant lacing wrapped around 10 to 15 times).

©Anna Saulle

The solidarity of the structure is assured by the resistance of the bamboo + the multiplicity of the knots on the lattice. Each edge of bamboo that is eye level is covered in rubber.
